

## ABSTRACT

An object of the present invention is to provide a resin microparticle for a toner raw material that has a small particle diameter and a narrow particle diameter distribution  
5 and has a low odor.

There are provided a resin microparticle for a toner raw material characterized in that all of the following requirements (i) to (iii) are satisfied:

Requirement (i): A particle diameter of 50% volume (D50) satisfies the relationship  $0.05 \mu\text{m} \leq D50 \leq 1 \mu\text{m}$ ;

10 Requirement (ii): A particle diameter of 10% volume (D10) and a particle diameter of 90% volume (D90) satisfy the relationship  $D90/D10 \leq 7$ ; and

Requirement (iii): The content of an organic solvent is not more than 70 ppm.
